

MAKING OUR HOMES WARMER

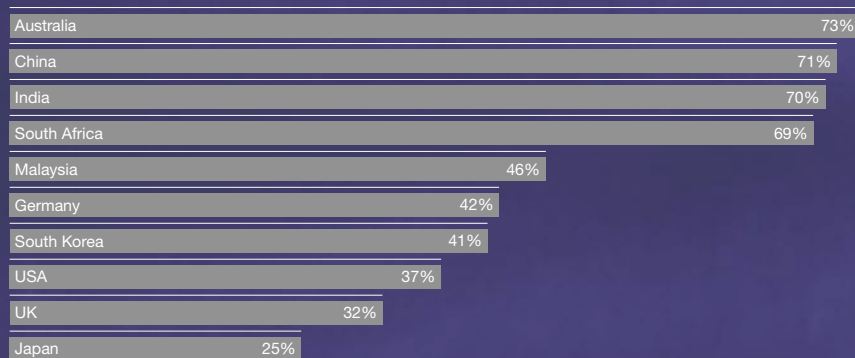

Coal is one of the world's main sources of power.
Fuelling our lives. Heating our homes.
Keeping us warm in winter. Affordable and widely
available, it brings light and heat to all four corners
of the Earth, satisfying people's basic needs even
in remote and less developed regions.

41% every 5th

of global electricity
generation
produced
using coal

individual in the world
still lacks access
to electricity¹

Share of coal in electricity generation in different countries
