

# MAKING THE WORLD GO ROUND

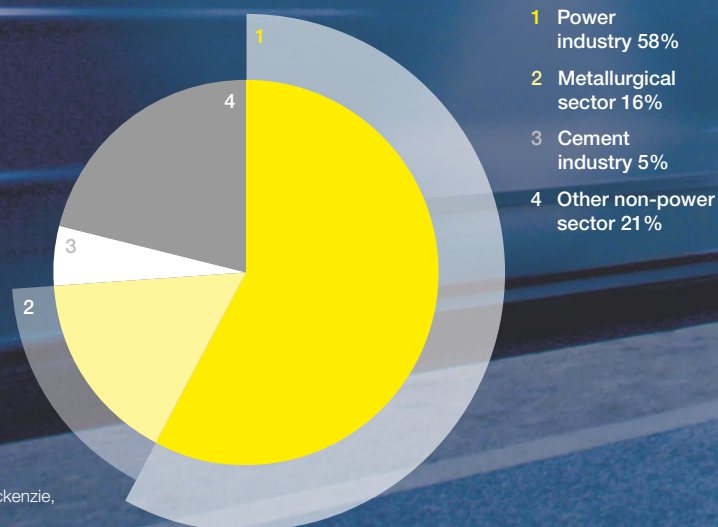

In the world's growing economies, coal is critical to the development of transport infrastructure because it is essential to the production of steel, aluminium and cement. Coal can also provide liquid fuel for cars and jets and generate power for electric vehicles. Meeting the energy needs of modern transport. Keeping people moving. Making the world go round.

50% 770kg

share of coal in the power mix used in aluminium production globally<sup>1</sup>

of coal is used to produce a tonne of crude steel<sup>1</sup>
